Not illustrated. 1883 edition. Excerpt: . which they supposed to be due to magnetization and to reversals of magnetization. Thus Joule revolved a piece of iron, contained in a tube of water, between the poles of a horseshoe magnet, and measured the rise of temperature and the work done. Van Breda placed an iron cylinder in a coil of copper wire, bored a hole in the iron, and placed the bulb of a spirit thermometer in this hole. On passing a continuous current of electricity through the coil, no increase of temperature was denoted by the thermometer. When, however, the current was made and broken Pogg. Ann., cxi., 1860. t Ann. Phys. Chem., 1881. t Phil. Mag., xxiii. 263, 847, 435, 1843. Compt. Rend., xxi. 961; also, Pogg. Ann., lxxviii. 552, 1846. thirty times a second by an interrupter, the thermometer showed a marked rise in temperature. Grove surrounded a horseshoe...
