Excerpt: . and accessories, three sight poles, piece of tracing cloth or tracing paper. Directions: 1. Choose three points, A, B and C, visible from a station P to be occupied by a plane-table. The points a, b, and c should be plotted to represent three visible points. 2. Find the point p corresponding to P by the mechanical solution on p. 329. 3. Check the work by the graphic solution (Bessel s method), p. 330. 4. Repeat the exercise by the trial method (Coast Survey method), p. 332. Suggestions: In this exercise time may be saved if the three given points are plotted before going into the field. For this reason the polygon used in one of the plane-table exercises already given may be chosen for this work, and three of its corners transferred to a clean sheet of paper by pricking through. When the fourth corner has been determined by the three-point method, the map of the whole polygon may be compared with maps made by other methods. Of course, it should be pointed out that when the three-point problem occurs in practice the three points themselves are usually long distances apart. Questions: 1. Explain the mechanical solution of the three-point problem, p. 329. 2. Comment on this method. p. 330. 3. Explain Bessel s method. p. 330. 4. What is the chief objection to Bessel s method? p. 330. 5. How may this difficulty be overcome? p. 330. 6. On what principle is...
